

Peter A. Lilley

Software Engineer - C#/.NET and C++17 Systems, Geometry and Automation Tooling

Chesterfield / St. Louis, MO | pal@cadpal.net | Phone: Available on request | github.com/freeParameterized | Free Parameter LLC

SUMMARY

Software engineer with a background in CAD and engineering. Builds web and mobile applications with React, Flutter, Postgres, and Firebase. Automates traditional processes with C#, C++17, and Python to simplify Civil 3D, AutoCAD, and Revit workflows. Adopted LLMs (Claude, ChatGPT, Gemini), and also writes code from scratch.

LANGUAGES AND SKILLS

Languages

Language	Strength	Professional years	Personal / passion years
C#	Strong	2	3
Python	Strong	2	2
C++17	Strong	0	6
Dart	Proficient	0	2
TypeScript	Proficient	0	2
JavaScript	Proficient	0	2
SQL	Working	0	2
AutoLISP / LISP	Working	2	2
VBA	Working	1	1

AI and related tools

Tool	Strength	Professional years	Personal / passion years
Prompt engineering (Claude, Cursor, ChatGPT)	Strong	2	3
OpenAI API (typed CAD pipeline)	Strong	2	0
Google Gemini API	Proficient	0	2
Local LLMs (Ollama)	Proficient	1	3
Tesseract OCR	Proficient	2	2

Spanish. Advanced conversational Spanish (placed into Level 4 / Advanced Conversational at Missouri S&T). Reads and discusses technical material in Spanish. Not a translation credential.

Professional years count paid jobs where that language shipped. Personal years count documented side projects, through 2026. C++ is self-taught.

Databases and Data Systems: SQLite, Firebase, Postgres, XData schemas, data modeling, JSON structuring, graph calculators, Tesseract OCR, Levenshtein matching

Engineering and math: Matrix math, 3D graphics, Express, React, Git (GitFlow, trunk-based, PRs, CI/CD), CMake, Linux, macOS, Docker, Bash scripting for data pipelines

Domain systems, quality, and networking: CAD plugins, Revit automation, 3D metadata, ARCore, part dimensioning, coordinate measuring machines, ISO 9001, TCP/IP, IPv4/IPv6 subnetting, Cisco routing and switching

EXPERIENCE

David Mason & Associates - Staff Technician (CAD automation / Civil 3D tools) Jul 2024 - Aug 2026
St. Louis, MO

Civil engineering firm delivering public infrastructure and campus work in the St. Louis region. Role: staff technician for Civil 3D automation — plugins, Dynamo scripts, and an internal command pipeline rather than

production drafting as the main output. Grew from removing one-off CAD bottlenecks into tooling the rest of the team runs daily, cutting hours of clicking to minutes on live airport and campus drawings.

- Built a generator for standard details and grading from existing company drawing data. Applied it to the existing utilities model for an airport project, covering hundreds of thousands of surveyed entities. Hand modeling that took days fell to minutes.
- Wrote Dynamo automation that reads Excel reports Civil 3D already generates and draws pipe flow levels and hydraulic grade lines. Other engineers verified the drop from about 8 hours of clicking to minutes.
- Built a Civil 3D GUI for less experienced CAD users: color-coded IntelliSense-style layer and entity search with autocomplete, dynamic entity pull, and a local phrase-to-command lookup. From one command it moves entities, runs basic draw commands, retargets objects onto other layers, and otherwise edits uniformly across every layout instead of clicking through them in sequence. Minutes of that work, often hundreds of clicks, became one command that finishes in about two seconds. Found repeating bottlenecks in the firm's CAD workflow and wrote programs to remove them.
- Built C# plugins against the Civil 3D .NET API to automate layout, audit drawings, and batch-rename title blocks. Attached typed metadata to Civil 3D objects so company standards sit on the entities.
- Built OCR ingestion software that parses existing PDF plan sets, checks values, and populates drawings.
- Built the firm's internal Civil 3D automation pipeline on the OpenAI API. It serves a user chat, scheduled batch jobs, and existing company drawing data as input for each request.
- Extended that pipeline to locate outdated sheet text and to compare design options. Authored and reviewed Git pull requests on the plugins and pipeline. Used GitFlow and trunk-based branching, resolved merge conflicts, and shipped through CI/CD.

Component Bar Products - Quality Engineer - Manufacturing / Precision Machining

Apr 2023 - Jun 2024

O'Fallon, MO

Precision machine shop producing bar-stock parts to customer prints. Role: quality engineer on the inspection bench — CMM programs, CAD-to-print checks, ISO 9001 calibration. Grew from running inspections into owning the metrology loop so dimensional misses died in the lab instead of at the customer.

- Programmed and operated coordinate measuring machines. Verified precision-machined parts against GD&T specifications.
- Validated dimensional tolerances against CAD models and prints to catch geometry mismatches.
- Enforced ISO 9001 across production lines. Managed calibration and traceability of metrology assets.

Menard, Inc. - Assistant Department Manager - Building Materials and Millwork

Jun 2020 - Mar 2023

Manchester / Ballwin, MO

Home-improvement retailer with contractor millwork and building-materials desks. Role: assistant department manager — staffing, commercial material estimates, contractor-facing pricing. Grew from covering the floor into running those estimates on a deadline and supervising department staff.

- Priced and estimated large commercial material orders. Supervised department staff.

Heideman & Associates, Inc. - Revit/CAD Technician - Mechanical/Plumbing

May 2018 - Apr 2019

Fenton, MO

Mechanical and plumbing engineering firm producing construction documents. Role: Revit and AutoCAD technician for MEP sheets and as-builts. Grew from drafting into reusable object libraries and standardized details so later sheets started from a consistent model.

- Produced MEP construction documents. Built as-built models in Revit and AutoCAD.
- Built automated data libraries for building-system objects. Standardized outdated details.

PROJECTS

Digital Twin Pro

Personal product, Free Parameter LLC | Flutter/Dart 3, SQLite, Firebase, Google Gemini API, ARCore | github.com/freeParameterized/digital-twin-pro

- Designed and shipped a cross-platform 3D inventory application to a Google Play beta.
- Architected a custom 3D renderer with a Z-sorted draw queue and a custom projection instead of a game engine. Used LLM assistance to write most of the code.
- Added photo-based item detection through a paid Gemini API. Stored inventory in SQLite with a move audit log and CSV/JSON export.

CAD integration bridge

C++17, Dear ImGui, Windows COM | [private repository](#), [walkthrough on request](#)

- Built a C++17 Dear ImGui host. It bridges BricsCAD, AutoCAD, and Civil 3D through Windows COM. It discovers installed SDKs at runtime and hot-loads LISP, C#, and BRX plugins.
- Personal prototype of the architecture later used on a commercial deployment.

Interactive Portfolio (this site)

React, TypeScript, Express

- Built a React and TypeScript front end over an Express API. The site builds to static files and needs no server to read.
- Generates the printable resume and PDF from the same JSON data.

EDUCATION

A.A.S., Building Systems Engineering Technology - Ranken Technical College

2019

Wentzville, MO

Coursework in Latin American Studies with Technical Applications - Missouri University of Science and Technology

2019 - 2020

Rolla, MO

Placed into Advanced Conversational Spanish (Level 4). Technical fluency in Spanish.
